Subject: Re: Videoconference debrief

It was a real pleasure hearing the students on stage confidently presenting the great work they had done. They all were knowledgeable regarding the subject at handwhich I would summarise as maximising benefits from health interventions through community engagement and participation.

Learning and understanding our communities seemed to be a very important component of community engagement and participation.

Bravo.

Nelson Sewankambo

in action Royall, Julia (NIH/NLM) [E] writes:

*My thanks to you all for your presence and presentations yesterday!
You were wonderfully poised, informed and enthusiastic and spoke from*

the

head and the heart. Please carry on with this work, and together

let's

*find ways to let the world hear about it. As you heard, there is
two-way learning which is happening!*

*From our end, I believe we achieved the programmatic goals of the
videoconference. You were able to present your work to an
international audience of experts with your Dean and COBES Director*

close by. We'll

be working on next steps and how to get rid of the technical glitches.

*All my best,
Julia*
